Special features

Auto measurements

With 32 standard automatic measurements. Each parameter can be selected independently and displayed simultaneously.

Reference waveform

Saves two sets of reference waveform and displays them simultaneously to make comparison.

FFT split display

Analyzes signal in frequency area, channel waveform and FFT displays simultaneously in one screen, giving direct waveform observation.

Pass/Fail Test

The built-in Pass/Fail testing provides quick problem identifying in production testing, possesses output OFF function, and improves testing efficiency.

Digital filter ON/OFF

Digital filtering is available on each channel and can be turned on or off. The Low-Pass, High-Pass, Band-Pass and Band-Stop filters allow you to isolate only the frequencies you want to see.

Independent channel control

Simple operation for independent channel control; backlit button design, clear and easy for measuring.

Delay scanning

Applies dual time base EasyZoom technology, giving perfect display for partial and complete waveforms.

Adjustable waveform intensity

Waveform intensity can be adjusted to give easy view of waveforms.

Pop-up menu

With pop-up menu, the menu can be hidden at any time to make full-screen display, making more convenient waveform observation.
