POWER METER Series

Measure Everything from AC, DC and 3-Phase Power Sources to Standby Power

The optimal power meter lineup for all applications

POWER METER PW3337/PW3336

HIOKI

AC/DC POWER HITESTER 3334

POWER HITESTER 3333

Advancing the Standard for Power Measurement

The best performing instruments for power measurement on production lines, in laboratories, and in research facilities. Hioki delivers the optimal power testing solutions based on use case conditions, practical application, and accuracy.

Three-phase Power Meter

The PW3337 and PW3336 are suitable for a wide variety of connections, such as measuring three-phase circuits and single-phase 2-wire multiple circuits. There is little internal resistance for the current input, and large currents up to 65 A can be measured with great accuracy.

Single-phase Power Meter

 The PW3335 provides highly accurate measurements for everything from standby power to operating power.
 Compliant with the IEC62301 measurement standard for standby power, it is capable of measuring current as low as 10 µA.
 Designed for power consumption testing, the 3334 and 3333 are guaranteed for accuracy for up to 3 years.

4

POWER METER PW3337/PW3336

Accurate measurement of power for three-phase equipment, through direct input up to 1000 V AC/DC / 65 A.

POWER METER PW3335

Highly accurate AC/DC measurements from standby power to operating power

PW3335-04 Front Panel

Half-rack Size to Save Space

For development/production lines for electrical equipment

- Voltage/current/power basic accuracy ±0.1% *
- Highly accurate AC/DC measurements from standby power to operating power
- Accuracy guaranteed throughout a wide range, from 10 µA to 30 A and 60 mV to 1000 V AC/DC
- Harmonic measurement as standard feature, IEC61000-4-7 compliant
- Compliant with the IEC62301 and EN50564 measurement standards for standby power
- Power factor effect of ±0.1% f.s. delivers highly accurate measurements even for no-load testing of transformers with a low power factor
- Accurate measurement of fluctuating electric power thanks to auto range integration with guaranteed accuracy for measurements while range switching
- Measure up to 5000 A AC with optional current sensor (PW3335-03, -04)

Voltage input terminal D/A output terminal

Current input terminal

AC/DC POWER HITESTER 3334

Measurement of power consumption and integrated power for battery-operated equipment, home appliances, and office equipment

- Accuracy guaranteed up to 3 years
- Compliant with the SPECpower® server power evaluation test

POWER HITESTER 3333

Low-price model for measurement of power consumption on production/inspection lines

• Compact model for saving space, even when added to a system

Units: mm

• Accuracy guaranteed up to 3 years

Dimensional Drawings

Applications

Inspection of Electrical Equipment Production Lines

Our lineup provides reliable accuracy for a variety of measurement scenarios. Accurately measure the power consumption of a variety of household appliances, such as liquid crystal displays, refrigerators, and air conditioners.

* For complete details, please refer to the specifications

Extensive Interfaces

The built-in interfaces are convenient for transferring data to a PC and equipping the unit on automated machines. PC communication software can be downloaded free of charge from the HIOKI website. For details about the built-in interfaces, refer to the specifications for each model.

(Longest in the Industry)

The 3333 and 3334 are guaranteed for accuracy for 3 years. Even after 3 years, they maintain an accuracy of ±0.5% rdg. as required for measurements. This 3-year accuracy guarantee, the longest in the industry, helps to save on calibration expenses.

Replacement for Analog Meters 4 3

These models can be used as replacements for analog voltmeters, ammeters, and watt meters. Up to 4 parameters such as voltage, current, and power can be displayed at the same time, allowing 3 measuring devices to be covered with a single unit. The digital display avoids issues such as parallax due to viewing angle and zero shift of the indicator.

Standby Power Measurement

The PW3335 is compliant with measurement standards for standby power, as well as other measurement standards including the ErP Directive and Energy Star. Special parameters required by such standards including THD, CF, and MCR can also be checked with

Compliant with IEC62301 and EN50564 Standards

this unit. Requirements for Measurement Instruments for Standby Power Measurements (excernt)

Standby I Ower Mee	isurements (excerpt)
Requirement	PW3335 Performance
Power resolution of 1 mW or better	 Minimum resolution of 0.01 mW (in the 300 V/1 mA range)
Crest factor 3 support	✓ Crest factor 6 support
Harmonic component measurement of up to at least 50th order	 Harmonic measurement as standard feature
Data acquisition via interface	✔ LAN (standard feature), RS-232C, GP-IB

THD (Total Harmonic Distortion): Indicates to what extent harmonic components are present in an AC waveform

CF (Crest Factor): Ratio of the peak value to the effective (RMS) value of an AC waveform MCR (Maximum Current Ratio): Current evaluation index, calculated from

the crest factor and power factor

Wide Range of Effective Measurement

The PW3335 has an effective measurement range of 1% to 150%. Due to this wide range of effective measurement, even equipment with large load fluctuations, such as refrigerators, heaters, and pumps, can be measured accurately under all conditions from noload to full operation.

Long-term Measurement of Refrigerator Power

Create Reports with Free Software

Standby power measurement software can be downloaded free of charge from the HIOKI website. Enter the required information to perform standby power measurements according to standards. Use this software to create reports of measurement results and save test data in CSV format.

AC and secondary DC

Support for CF6 (Crest Factor 6)

When an AC adapter or switching power supply operates with no load, the crest factor of the current waveform increases. The PW3335 can measure waveforms that exceed the range of watt meters that support crest factor 3.

In addition, although the power factor is low during no-load operation, the PW3335 is affected very little by power factor and can therefore achieve accurate measurements.

Example of Standby Current Waveform (CF = Peak Value, RMS = 4.8)

Measurement of Fluctuating Loads and Power Supply Control

Auto Range Integration with Guaranteed Accuracy when Switching Ranges

These models automatically jump to the optimal power range according to current consumption when performing integration measurements. When switching ranges, power is integrated using the B range*, and therefore there is no loss of integration data. Achieve seamless power integration with guaranteed accuracy, even with loads that experience frequent and repeated fluctuations. In addition, since power integration can be performed for individual ranges, you can measure integrated power for the various conditions of devices that experience power fluctuations.

Intermittent Power Supply

PW333 7 PW333 6 PW333 5

Devices that perform intermittent operation and cycle control repeat a cycle of stopped states and operating states. Therefore, with normal power measurement, it is not possible to determine a value for rated power consumption.

Time average active power (current) is a function that allows the measurement of the time average for power (current) that experiences fluctuations.

AC/DC Measurement

.6 .5 ...4 7

"**5**]

For equipment that uses rectifiers and control devices, it might not be possible to accurately measure voltage or current without an AC/DC power meter.

- · Half-wave rectified waveforms used for dryers and fans
- · Full-wave rectified waveforms used for AC adapters
- · Cycle control waveforms used for voltage and temperature adjustment heaters
- · DC waveforms with superimposed ripple components

Half-wave Rectified Waveform

Full-wave Rectified Waveform

Cycle Control Waveform

DC Waveform with Superimposed Ripple

Compliant with IEC61000-4-7 Harmonic Measurement Standards

These models are compliant with the IEC61000-4-7 international standard for harmonic measurements. Conduct harmonic analysis up to the 50th order. The upper limit for harmonic analysis can be set from 2nd to 50th, according to the standard used.

IEC61000-4-7 is an international standard for the measurement of harmonic current and harmonic voltage in power supply systems, and the harmonic current emitted from devices. It specifies the performance of standard measurement instruments. Among the series of standards that include specifications for power measurements, it is used as a reference standard for harmonic measurements.

Support for Various Connections

The PW3337 supports not only 3V3A, but also a variety of threephase connections such as 3P4W, 3P3W2M, and 3P3W3M. Accuracy Guaranteed for Currents Up to 65 A

Because DCCT allows a current with an input resistance of 1 m Ω or less, accuracy is guaranteed up to 65 A. No heat is generated even with the input of large currents, so there is no loss of accuracy due to self heating. Even if the current exceeds 65 A, an optional current sensor allows measurements up to 5000 A.

DCCT current sensor (in the PW3337)

Temperature distribution image at 30 A DC/10-minute input

PW333 7 PW333 6 PW333

Inverter Efficiency Measurement

Wide Frequency Band (DC, 0.1 Hz to 100 kHz)

These models cover not only the fundamental frequency bands for inverters, but also carrier frequency bands, in a wide range that includes DC and frequencies from 0.1 Hz to 100 kHz.

24-channel Power Meter with Synchronous Control for up to 8 Units

Connect 8 units for synchronous measurement of up to 24 channels. The calculation and control timing for PW3337, PW3336, and PW3335 units that are set as slaves are synchronized with the master unit. Use this feature to measure the I/O efficiency of power supply devices, compare multiple pieces of equipment, or to perform simultaneous parallel testing of production lines. Use the free PW COMMUNICATOR* software to calculate the efficiency between multiple units and to acquire data simultaneously from multiple units.

* This software can be downloaded from the HIOKI website.

Independent Ranges Per Channel for Highly Accurate Measurements

Independent channels allow the selection of the optimal range for each connection. One example is the simultaneous measurement of the primary side (DC) and secondary side (three-phase) of a PCS using a single unit. Selecting the optimal range for each target to be measured enables highly accurate measurements.

Setting Optimal Range According to Target to be Measured

Simultaneous Measurement of Power Data and Harmonics

In addition to standard measurement items such as voltage, current, and power, all items related to harmonics, such as distortion and content percentage, are calculated internally in parallel at the same time. Items such as RMS value, MEAN value, DC components, AC components, and fundamental wave components can all be confirmed simply by switching the display. Even for DC waveforms with superimposed ripple components, the AC/DC components can be measured separately.

In addition, when using PC software, more than 180 measurement items can be acquired at the same time.

I/O Efficiency Calculation with a Single Unit

Input and output can be measured independently at the optimal ranges, and the PCS efficiency can be calculated and displayed on a single unit. PCS can be evaluated with a simple system configuration.

1000 V Range for Evaluation of Large Power Conditioners

These models support the measurement of large voltages, which is required in order to measure power conditioners for solar power generation. Measure up to 1000 Vrms and 1500 Vpeak.

Aggregation of Output from DC Current Sensors (Up to 4000 A)

SENSOR UNIT CT9557 is a power supply for highly accurate current sensors that have a waveform output function. In addition to using it as a 4-channel power supply, it is also equipped with a sum feature for aggregating the input waveforms into a single waveform to be output.

Aggregating the Output from 4 Sensors into One Unit

Filter that prevents aliasing errors during sampling

Output Function Linked with Recorder

Display Trends with a Data Logger

The level output (analog output) function delivers measured values that are displayed on the power meter with an analog voltage that is updated every 200 ms. Connect the unit to a data logger to check trends through synchronization with data such as temperature and heat flow*.

* Heat flow: Parameter for understanding the heat reception and heat dissipation of an object. Can be measured with a heat flow sensor.

Observe Power for Each Cycle [PW333 7] [PW333 6] [PW333 5]

The PW3337, PW3336, and PW3335 feature built-in, high-speed active power level output. Level is output for power per cycle. When used in combination with a memory hicorder, fluctuations in power can be observed in real time. This feature is also useful for analyzing equipment that uses power, such as monitoring cutting and grinding tools.

* With the PW3335, high-speed level output is also possible for 45 Hz to 66 Hz voltage and current.

Observe Waveforms with a Memory Hicorder

PW333

The waveform output function outputs the voltage/current waveforms captured by a power meter in the form of high-speed analog voltage. Connect to a memory recorder to check behavior when load fluctuates, such as with the inrush current of a motor.

Log Data Measured by a Power Meter Wirelessly on a Hioki Logger(LR8410 Link)

Wirelessly transmit measurement parameters from the Power Meter PW3335 (excluding model -01) to a Wireless Logging Station LR8410 via Bluetooth[®] wireless technology*.

- The PW3335-02 and PW3335-04 can transmit 7 D/A output parameters.
- The PW3335, PW3335-03 can transmit 4 parameters: voltage, current, power and power factor.

This allows you to combine the voltage and temperature data from the Logger with the current and power from the Power Meter in real time.

* Connection requires the serial - Bluetooth[®] wireless technology conversion adapter recommended by Hioki. Please inquire with your Hioki distributor.

Power Factor Effect of 0.1% or Less, Even at Low Power Factors

A no-load loss test is one indicator for evaluating energy conservation for transformers and motors. The PW3337 and PW3336 are affected very little by power factor, at $\pm 0.1\%$ f.s. or less, allowing active power to be measured with a high level of accuracy at low power factors.

PW3330 Series Power Factor Effect (Typical) With f.s. input for voltage/current range, and a power factor of 0

Support for Crest Factor 6

The crest factor of a current waveform increases during no-load operation. The PW3337, PW3336, and PW3335 support a crest factor 6. Therefore, even if the waveform peak value is large relative to the range, accurate measurements are possible without exceeding the range.

Example of Transformer Current Waveform during No-load Operation

DC Power Measurement for Batteries and Power Supplies

Best-in-class DC Power Accuracy

These models are best for measuring battery power consumption and output from switching power supplies. Make accurate measurements of DC power, which is an important factor in improving efficiency and saving energy.

±0.1%

* For complete details, please refer to the specifications

Key features

DC power accuracy ±0.2% rdg.

Power integration function by polarity

Current and Power Integration Function by Polarity

For integrated measurements, recharging power and discharging power are integrated by polarity every 200 ms. The amount of power in the positive direction, the amount of power in the negative direction, and the sum of the amounts of power in the positive and negative direction during the integration period are measured. Accurate measurement of recharging power and discharging power is possible even if there is rapid repetition of battery recharging/discharging.

Numerical value monitoring	Display the PW3337/PW3336/PW3335 measurement values on the PC screen. You can freely select up to 64 values, such as voltage, current, power, and harmonics.
Waveform monitoring	The voltage, current, and waveforms measured by the unit can be monitored on the PC screen.
Meter setting	The configuration of the connected power meter can be changed on the PC screen.
Synchronous measurement	Efficiency calculations, such as input/output of the power supply conversion device, are possible between multiple power meters. Use a sync cable to connect and synchronize the control of up to 8 units.
Save in chronological order	More than 180 pieces of measured data can be recorded to a file in CSV format at regular time intervals. The minimum time interval for recording is 200 ms.

LabVIEW Driver

PW333 7 PW333 6 PW333 5

Obtain data and configure measurement systems with the LabVIEW driver. (LabVIEW is a registered trademark of NATIONAL INSTRUMENTS.)

Sample Software

Sample software for loading data (via RS-232C) can be downloaded from the HIOKI website.

- The 3333/3334 front panel is displayed on the PC screen. Operate the power meter or change settings directly on the PC.
- The measured values for the 3333/3334 are displayed in real time on the PC screen. Save data as a CSV file.

Standby Power Measurement Software

"Standby Power Measurement Software" is an application software exclusively designed for the Power Meter PW3335. This software lets you to view PW3335 measurement data and also save them as reports or in CSV format via a LAN, GP-IB, or RS-232C. Measure standby power consumption in accordance with IEC62301. Download the software free of charge from the HIOKI website.

Workflow for Standby Power Test 1. Connect to power meter 5. Run test Configure the settings for communication with a The consumed power is measured according to the configured power meter. Connect the PC to a power meter, and settings. enter the settings required for the interface used (LAN/RS-232C/GP-IB). Elast 6. Create report Create a report of the test results. Output either a PDF report or CSV file. Standby Power Test Report (IEC 62301:2011) 2. Configure the test target Enter the information of the device under test. •To obtain the current or active power accuracy, add the current sensor's accuracy to the above current and active power accuracy figures.

D/A Output Specifications (PW3336-02/-03 and PW3337-02/-03)

Number of output channels	16
Configuration	16-bit D/A converter (polarity + 15 bits)
Output parameters	U1 to U3 (voltage level) or u1 to u3 (instantaneous voltage waveform) (switchable) I1 to I3 (current level) or i1 to i3 (instantaneous current waveform) (switchable) P1 to P3 (active power level) or p1 to p3 (instantaneous power waveform) (switchable) Psum (active power level) or Hi-Psum (high-speed active power level) (switchable) Psum and Hi-Psum output is not available (0 V) when using the 1P2W wirring mode. P12 is output when using 1P3W, SP3W, or 3P3W2M, and P123 is output when using 3V3A, 3P3W3M, or 3P4W. D/A1 to D/A3 : Select any 3 from channel or sum value for Voltage, Current, Active power, Apparent power, Reactive power, Power factor, Phase angle, Total harmonic voltage/current distortion, Inter-channel voltage/current fundamental wave phase difference, Voltage/current rest factor, Time average current/active power, Voltage/current tripple rate, Frequency, Efficiency, Current integration, Active power indegration (Harmonic output is not available for individual orders). Hi-P1 to Hi-P3 and Hi-Psum (high-speed active power level): Fixed to AC+DC For other level output, select AC+DC, AC+DC Umn, DC, AC, or fnd.

Output accuracy	I.s.: Relative to the output voltage rated value for each output parameter
	Level output
	: (Output parameter measurement accuracy) + (±0.2% f.s.)
	High-speed active power level output
	: (Output parameter measurement accuracy) + (±0.2% f.s.)
	Instantaneous waveform output
	: (Output parameter measurement accuracy) + (±1.0% f.s.)
	Instantaneous voltage, instantaneous current: RMS value level
	Instantaneous power: Average value level
Output frequency	Instantaneous waveform output, high-speed active power level output
band	At DC or 10 Hz to 5 kHz, accuracy is as defined above.
Output voltage	Level output
Output voltage	Voltage, Current, Active power, Apparent power,
	Reactive power, Time average current/active power
	: ±2 V DC for ±100% of range Power factor
	: ±2 V DC at ±0.0000, 0 V DC at ±1.0000
	Phase angle
	: 0 V DC at 0.00°, ±2 V DC at ±180.00°
	Voltage/current ripple rate, total harmonic voltage/current distortion
	: + 2 V DC at 100.00%
	Voltage/current crest factor
	: +2 V DC at 10.000
	Frequency
	: Varies with measured value.
	+2 V DC per 100 Hz from 0.1000 Hz to 300.00 Hz
	+2 V DC per 10 kHz from 300.01 Hz to 30.000 kHz
	+2 V DC per 100 kHz from 30.001 kHz to 220.00 kHz
	Efficiency
	: +2 V DC at 200.00%
	Current integration, active power integration
	: ±5 V DC at (range) × (integration set time)
	Waveform output
	: 1 V f.s. relative to 100% of range
Maximum output voltage	Approx. ±12 V DC
Output update rate	Level output
	: Fixed at 200 ms ±50 ms (approx. 5 times per sec.)
	Update rate is unrelated to number of averaging iterations
	setting and display hold operation.
	Waveform output
	: Approx. 11.4 µs (approx. 87.5 kHz)
	High-speed P level
	: Updated once every cycle for the input waveform set as the synchronization source.
Response time	Level output
	: 0.6 sec. or less (when the input changes abruptly from 0% to 90%, or from
	100% to 10%, the time required in order to satisfy the accuracy range)
	Waveform output
	: 0.2 ms or less
	: 0.2 ms or less High-speed active power level output
Temperature characteristic	High-speed active power level output
Temperature characteristic Output resistance	High-speed active power level output : 1 cycle

Output accuracy [f.s.: Belative to the output voltage rated value for each output parameter

Functions	Integration start/stop, integration reset and hold via external control					
External control	Input signal level: 0 to 5 V (high-speed CMOS level or shorted [Lo]/open [Hi])					
	Functions	Functions External control signal External control terminal				
	Start	$Hi \rightarrow Lo$	START/STOP			
	Stop	$Lo \rightarrow Hi$	01/ (11/0101			
	Reset	Lo interval of at least 200 ms	RESET			
	Hold on	$Hi \rightarrow Lo$	HOLD			
	Hold off	$Lo \rightarrow Hi$	HULD			

GP-IR interface (PM/3336-01/-03 PM/3337-01/-03)

GP-IB Interface	(PVV3336-01/-03, PVV3337-01/-03)		
Method	IEEE488.1 1978 compliant; see IEEE488.2 1987		
	Interface functions: SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT1, C0		
	Remote control by controller		
Address	00 to 30		
RS-232C interfa	ace (built-in feature)		
Connector	D-sub 9-pin connector × 1		
Communication	Full duplex, Start-stop synchronization, Stop bits: 1 (fixed),		
method	Data bits: 8 (fixed), Parity: None		
	Remote control by controller		
Communication Speed	9600bps/38400bps		

I AN interface (built in feature)

LAN interface (built-in feature)			
Connector	RJ-45 connector × 1		
Electrical Specifications	IEEE802.3 compliant		
Transmission Method	10BASE-T/100BASE-TX (automatic detection)		
Protocol	TCP/IP		
Functions	HTTP server (remote operation, firmware updates)		
	Dedicated ports (command control, data transfer)		
	Remote control by controller (REMOTE lamp will light up.)		
General Specific	cations (product guaranteed for 3 year)		
Operating environment	Indoors, altitude up to 2000 m (6562-ft.), pollution degree 2		
Operating temperature and humidity	0 to 40°C (32 to 104°F), 80% RH or less (non-condensating)		
	-10 to 50°C (14 to 122°F) 80% RH or less (non-condensating)		
Dielectric strength	4290 Vrms AC (sensed current: 1 mA)		
0	Between voltage input terminals and (case, interface, and output terminals)		
	Between current direct input terminals and (case, interface, and output terminals)		
	Between voltage input terminals and current direct input terminals		
Maximum rated	Voltage input terminal, Current direct input terminal		
voltage to earth	Measurement category III 600 V (anticipated transient overvoltage 6000 V)		
M	Measurement category II 1000 V (anticipated transient overvoltage 6000 V)		
	Between voltage input terminals U: 1000 V, ±1500 Vpeak		
	Between +/- current direct input terminals I: ±70 A, ±100 Apeak		
	Safety : EN61010, EMC : EN61326 Class A/ EN61000-3-2/ EN61000-3-3		
	100 VAC to 240 VAC, Rated power supply frequency : 50/60 Hz		
Maximum rated power			
Dimensions	Approx. 305W(12.01") × 132H(5.20") × 256D(10.08") mm		
Mara	(excluding protrusions)		
Mass	PW3336 series Approx. 5.2 kg (183.4 oz.)		
Accession	PW3337 series Approx. 5.6 kg (197.5 oz.)		
Accessories	Instruction manual × 1, Measurement guide × 1, Power cord × 1		

PW3335 Specifications

Input Specifications

Measurement line type	Single-phase 2-wire(1P2W)		
Input methods	Voltage Isolated input, resistive voltage divider method		
	Current Isolated input, shunt input method		
Voltage measurement	AUTO/ 6 .0000 V/ 15.000 V/ 30.000 V/ 60.000 V/ 150.00 V/		
ranges	300.00 V/ 600.00 V/ 1.0000 kV		
Current	AUTO/ 1.0000 mA/ 2.0000 mA/ 5.0000 mA/ 10.000 mA/		
measurement	20.000 mA/ 50.000 mA/ 100.00 mA/ 200.00 mA/ 500.00 mA/		
ranges	1.0000 A/ 2.0000 A/ 5.0000 A/ 10.000 A/ 20.000 A		
Power ranges	Depends on the combination of voltage and current ranges;		
	From 6.0000 mW to 20.000 kW (also applies to VA, var)		
	The details are as below.		
Input resistance	Voltage input terminal: 2 MΩ		
	Current input terminal: 1 mA to 100 mA range 520 mΩ or less		
	200 mA to 20 A range 15 mΩ or less		

 Basic Measurement Specifications

Voltage/ Current/ Active Power Measurement Specifications		
Measurement types	Rectifiers: AC+DC, DC, AC, FND, AC+DC Umn	
Effective measuring range	Voltage ±1% to ±150% of the range. However, up to ±1500 V peak value and 1000 V RMS value	
	Current ±1% to ±150% of the range	
	Active Power ±0% to ±225% of the range. However, valid when the voltage and current fall within the effective measurement range.	
Display range	Voltage Up to $\pm 152\%$ of the range. However, zero-suppression when less than $\pm 0.5\%$	
	Current Up to $\pm 152\%$ of the range. However, zero-suppression when less than $\pm 0.5\%$ or less than $\pm 9\ \mu$ A.	

	However, zero-suppression when less than $\pm 0.5\%$ of less than ± 9 µ.
	Active Power ±0% to ±231.04% of the range (no zero-suppression)
Polarity	Voltage/ Current Displayed when using DC rectifier
	Active Power Positive : Power consumption (no polarity display) Negative : generation or regenerated power

	CT ratio setting range OFF	(1.0), 0.001 to 1000	
Hold	 Stops display updates for all r 		
	display values at that point in • Measurement data acquired b	time. by communications is also fixed at	
	that point in time.		
	 Internal calculations (includin elapsed time) will continue. 	g integration and integration	
	 Analog output and waveform 	output are not held	

Maximum value/ minimum value hold (MAX/MIN HOLD)	 Detects maximum and minimum measured values (except current integration, active power integration, integration elapsed time, time average current, and time average active power values) as well as maximum and minimum values for the voltage waveform peak and current waveform peak and holds them on the display. For data with polarity, display of the maximum value and minimum value for the data's absolute values is held (so that both positive and negative polarity values are shown). However, this does not apply to the voltage waveform peak value or the current waveform peak value. Internal calculations (including integration and integration elapsed time) will continue. The maximum and minimum value sduring integration are detected (maximum/minimum value measurement during the integration interval). Analog output and waveform output are not held.
Zero Adjustment	Zeroes out the voltage and current input offset.
Key-lock	Disables key input in the measurement state, except for the KEY LOCK key.
Backup	Backs up settings and integration data if the instrument is turned off and if a power outage occurs.

System Reset

Integration Meas	surement Specifications Switchable between fixed-range integration and auto-range integration.
operation modes	Fixed-range integration Integration can be performed for all voltage and current ranges. The voltage and current ranges are fixed once integration starts.
	Auto-range integration Integration can be performed for all voltage ranges. The current is set to auto-range operation using ranges from 200 mA to 20 A. The integrated value for each range can be displayed by switching
Measurement items and display	Positive current integrated value (Ah+) Negative current integrated value (Ah-) Sum of current integrated values (Ah) Positive active power integrated value (Wh+) Negative active power integrated value (Wh-)
Measurement	Sum of active power integrated values (Wh) Rectifiers: AC+DC, AC+DC Umn
types	Current: Displays the result of integrating current RMS value data (display values) once every display update interval as an integrated value.
	Active power: Displays the result of integrating active power values by polarity calculated once every cycle for the selected synchronization source as integrated values.
	Rectifier: DC Displays the result of integrating instantaneous data obtained by sampling both current and active power by polarity as integrated values (these values are not integrated values for the DC component when active power contains both DC and AC components)
Integration time	1 min. to 10000 hr., settable in 1 min. blocks
Integration time accuracy	±0.01% rdg. ±1 dgt.
Integration measurement accuracy	(Current or active power measurement accuracy) + (±0.01% rdg. ±1 dgt.)
Effective measuring range	Until PEAK OVER U lamp or PEAK OVER I lamp lights up.
Display resolution	999999 (6 digits + decimal point)
Functions	 Stopping integration based on integration time setting (timer) Stopping/starting integration and resetting integrated values based on external control Displaying the integration elapsed time (displayed as TIME on panel display) Additional integration by repeatedly starting/stopping integration Backing up integrated values and the integration elapsed time during power outages Stopping integration when power returns

- ±0.3%15.
 Values for f.s. depend on measurement ranges.
 "F" in the tables refers to the frequency in kHz.
 To obtain the current or active power accuracy, add the current sensor's accuracy to the above current and active power accuracy figures.
 The effective measurement range and frequency characteristics conform to the current sensor's specifications.
 The following input are considered reference values:
 Values for voltage and active power in excess of 220 V for which 10 Hz ≤ f < 16 Hz.
 Values for voltage and active power in excess of 750 V for which 10 Hz ≤ f < 100 kHz.
 When using the CT684x-05 series, add ±2 mV to the CT684x-05 series accuracy after performing CT684x-05 series zero adjustment using the 1 A range noted on the panel.

Temperature coefficient	Current, active power: ±0.08%f.s./°C or less (instrument temperature coefficient; f.s. : instrument measurement range) Add current sensor temperature coefficient to above.			
Effect of power factor	Instrument: ±0.15%f.s. or less (45 to 66 Hz with power factor = 0) Internal circuit voltage/current phase difference: ±0.0859° Add the current sensor phase accuracy to the internal circuit voltage/current phase difference noted above.			
Current waveform peak value measurement specifications	$\pm 2.0\%$ at DC or 10 Hz $\leq f \leq$ 1 kHz Add the current sensor accuracy			
Harmonic	External current sensor input instru	ment measurement accuracy onl		
measurement	Frequency (f)	Voltage, Current, Active power		
accuracy	DC	±0.4% rdg.±0.2%f.s.		
	10 Hz ≤ f < 30 Hz ±0.4% rdg.±0.2%f.s			
	30 Hz ≤ f ≤ 400 Hz	±0.3% rdg.±0.1%f.s.		
	400 Hz < f ≤ 1 kHz	±0.4% rdg.±0.2%f.s.		
	1 kHz < f ≤ 5 kHz	±1.0% rdg.±0.5%f.s.		
	5 kHz < f ≤ 8 kHz	±4.0% rdg.±1.0%f.s.		
	 Values for f.s. depend on measurement ranges. To obtain the current or active power accuracy, add the current sensor's accuracy to the above current and active power accuracy figures. When using the CT684x-05 series, add ±2 mV to the CT684x-05 series accuracy after performing CT684x-05 series zero adjustment using the 1 A range noted on the panel. 			

(PW3335-02 and PW3335-04)

Number of output channels	7 channels
Configuration	16-bit D/A converter (polarity + 15 bits)
Output voltage	The output level, output speed, and waveform output can be selected. Level output 2 Vf.s. or 5 Vf.s., linked to display updates High-speed level output 2 Vf.s. or 5 Vf.s., linked to synchronization interval Waveform output 1 Vf.s., linked to sampling
Output parameters	Output parameters for all channels Available selections vary with the output parameter. Level output/ High-speed level output/ Waveform output Voltage, current, active power Only Level output Apparent power, reactive power, power factor, phase angle, total harmonic voltage distortion, total harmonic current distortion, voltage ripple rate, current ripple rate, voltage crest factor, current crest factor, time average current, time average active power, maximum current ratio Only Level output 5 Vf.s. Frequency, current integration, active power integration The rectifier can be selected.
	Harmonic-order output is not supported.

Output accuracy	f.s.: Relative to the output voltage rated value for each output
	parameter
	(Output parameter measurement accuracy) + (±0.2%f.s.)
	High-speed level output (Output parameter measurement accuracy) + (±0.2%f.s.)
	Waveform output
Output frequency	(Output parameter measurement accuracy) + (±1.0%f.s.) Waveform output, high-speed level output
band	At DC or 10 Hz to 30 kHz, accuracy is as defined above.
Maximum output voltage	Approx. ±12 V DC
Output update	Level output
rate	Same as the data update period. High-speed level output
	AC Updated once every cycle for the input waveform set as the
	synchronization source. However, voltage and current are only updated once every cycle for input signals from 45 to 66 Hz.
	Waveform output Approx. 1.43 µs (approx. 700 kHz)
Response time	Level output
	0.6 sec. or less High-speed level output
	2 ms or less
	Waveform output 0.2 ms or less
Temperature	±0.05%f.s./°C or less
Coefficient Output resistance	Αρρrox. 100 Ω
External contro	
	Integration start/stop, integration reset and hold via external
	control
Input signal level	0 to 5 V (high-speed CMOS level) or shorted [Lo]/ open [Hi]
GP-IB interface PW3335-01 ar	nd PW3335-04)
Method	Compliant with IEEE488.1 1987, in reference to IEEE488.2 1987
	Interface functions
