Digital ORP sensor Memosens CPS42E

Memosens 2.0 ORP sensor for applications with fast-changing medium compositions or low conductivity

Benefits:

- Memosens 2.0 offers extended storage of calibration and process data, enabling better trend identification and providing a future-proof basis for predictive maintenance and enhanced IIoT services.
- Resistant to poisoning due to permanent refilling of KCl bridge electrolyte and separate reference lead
- Perfectly suited for quickly changing media: Combination of liquid KCl electrolyte and ceramic junction enables fast response time
- Applicable at very low conductivities (> 5 µS/cm) thanks to liquid KCl electrolyte
- Suitable for cleaning in place (CIP) and sterilization in place (SIP)
- Maximum process safety through non-contact inductive signal transmission
- Reduced operating costs due to minimized process downtime and extended sensor lifetime

Specs at a glance

- Measurement range -1 500 to 1 500 mV
- **Process temperature** –15 to 135 °C (5 to 275 °F)
- Process pressure 0.8 to 11 bar (11.6 to 159.5 psi) (absolute)

Field of application: Memosens CPS42E is the high performer for harsh chemical applications, media with low conductivity or considerable organic content. The sensor is designed for fast response especially in applications with fast-changing media. Thanks to Memosens 2.0 digital technology, CPS42E combines maximum process integrity with simple operation. It resists moisture and enables lab calibration. It offers

Endress+Hauser

More information and current pricing: www.endress.com/CPS42E extended storage of calibration and process data providing the perfect basis for predictive maintenance.

Features and specifications

ORP / Redox

Measuring principle

Sensor ORP / Redox

Application

Media with very low conductivity or a high proportion of organic solvents or alcohol:

- Chemical industry
- Organic chemicals
- Power stations
- Laboratory measurements

Characteristic

Digital ORP electrode for process engineering with ceramic junction and KCI liquid electrolyte

Measurement range

-1 500 to 1 500 mV

Measuring principle

Liquid-KCl filling and ceramic junction

Design

All shaft lengths with temperature sensor

Material

Sensor shaft: Glass to suit process ORP measuring element: Platinum Metal lead: Ag/AgCl Open aperture: Ceramic junction, zirconium dioxide O-ring: FKM Process coupling: PPS fiber-glass reinforced Nameplate: Ceramic metal oxide

ORP / Redox

Dimension

Diameter: 12 mm (0.47 inch) Shaft length: 120, 225, 360 and 425 mm (4.72, 8.86, 14.17 and 16.73 inch)

Process temperature

-15 to 135 °C (5 to 275 °F)

Process pressure

0.8 to 11 bar (11.6 to 159.5 psi) (absolute)

Temperature sensor

NTC 30k

Ex certification

With ATEX, IECEx, CSA C/US, NEPSI, Japan Ex and INMETRO approvals for use in

hazardous areas Zone 0, Zone 1 and Zone 2.

Connection

Inductive, contactless connection head with Memosens 2.0 technology

Ingres protection

IP68
