POWER ANALYZER PW3390

High Accuracy Power Analysis. <u>Anywhere, Anytime</u>.

Scan QR Code to Watch Video Newly Added Functions

High Accuracy and Mobility. A New Value for Power Analysis.

The first-generation Power Analyzer 3390 debuted in 2009 with a collection of the latest measurement technologies packed into a compact design.

Pair with Hioki current sensors and take them anywhere to immediately make highly accurate measurements.

This was the unique value of the 3390.

Now, Hioki has enhanced this value while refining the measurement technology even further.

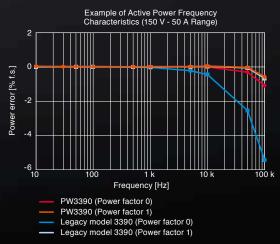

Proper accuracy and bandwidth to precisely measure inverter output. Phase shift function for the exact measurement of high frequency, low power factor power. A broad current sensor lineup that expands the range of measurement possibilities.

Refinements that empower you to conduct precise power analysis in any situation.

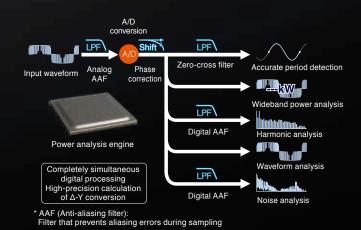

Complete Pursuit of Measurement Accuracy and High Frequency Characteristics

The PW3390 delivers 4 input channels and $\pm 0.04\%$ basic accuracy for power - the top instrument in its class. Achieve more precise measurements of the power and efficiency of high efficiency equipment used in power electronics. Further, a 200 kHz measurement band and flat amplitude and phase characteristics up to high frequencies enable the precise measurement of power at top frequency levels and low power factor.

Power Analysis Engine That Achieves High-Speed Simultaneous Calculation on 5 Systems

Precisely capture input waveforms with 500 kS/s high-speed sampling and a high resolution 16-bit A/D converter. The power analysis engine performs independent digital processing for 5 systems: period detection, wideband power analysis, harmonic analysis, waveform analysis, and noise analysis. High-speed simultaneous calculation processing enables both precise measurements and a 50 ms data refresh rate.

Built-in Current Sensor Phase Shift Function

Equipped with new virtual oversampling technology. Achieve phase shift equivalent to 200 MS/s while maintaining a high

speed of 500 kS/s, as well as a high resolution of 16 bits.

Set and correct the phase error of the current sensor at a

resolution of 0.01°. Use of the phase shift function results in

a dramatic reduction of measurement error. This allows the

measurement of high-frequency, low-power factor power

included in the switching frequency of inverter output, which is

difficult to measure with conventional equipment.

Current Sensors for the Thorough Pursuit of High Accuracy. <u>Achieve Superior</u> Accuracy for High-Frequency, Low Power Factor Power.

High Accuracy Pass-Through Sensor

Pass-through sensors deliver accuracy, broad-band performance, and stability. Measure currents of up to 1000 A with a high degree of accuracy across a broad range of operating temperatures.

High Accuracy Clamp Sensor

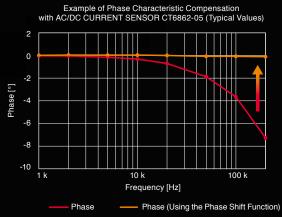

Clamp for quick and easy connections. Conduct extremely accurate measurements of large currents to a maximum of 1000 A over a wide operating temperature range.

High Accuracy Direct Wiring Sensor

Newly developed DCCT method delivers expansive measurement range and superior measurement accuracy at a rating of 50 A.

* Virtual oversampling:

Technology that uses a sampling frequency several hundred times higher than the actual sampling frequency to perform virtual deskewing

In the Laboratory or in the Field

Take Highly Accurate Measurements Even in Tough Temperature Conditions

Severe temperature environments, such as engine rooms with intense temperature changes and constant temperature rooms, can hinder high accuracy measurements. The extremely accurate pass-through and clamp type sensors both feature excellent temperature characteristics and a wide operation temperature range to help address these challenges.

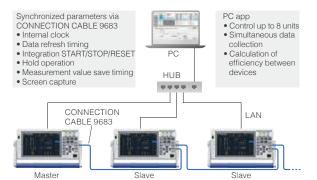

Max. 6000 A Measurement on 50 Hz/60 Hz Lines

The CT7040 AC FLEXIBLE CURRENT SENSOR series can measure commercial power lines up to 6000 A, including solar power conditioner output. Even thick cables can be wired easily among crowded wiring or in narrow locations.

Acquire Data from up to 8 Synchronized Units (32 Channels)

When you connect CONNECTION CABLE 9683 to multiple PW3390 units, the control signals and internal clocks synchronize. From the master unit, you can control the measurement timing on the PW3390 units that are set as slaves. With interval measurement, you can save synchronized measurement data to a CF card or a PC to achieve simultaneous measurements across a larger number of systems.

Achieve High Accuracy Measurement Even in the Field

Dramatically compact and light-weight form factor achieved by concentrating the calculation functions in the power analysis engine. Highly accurate measurements normally achieved in the laboratory are now also possible in the field.

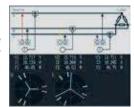

External Power Supply Not Needed for Sensor Connections

Power can be supplied to the current sensor from the main unit, so there is no need to provide a separate external power supply for the current sensor. Connected sensors are recognized automatically, for reliable and quick measurements.

Wiring Displays and Quick Setup Lets You Begin Measuring Immediately

Perform wiring while checking wiring diagrams and vectors on the screen. Optimum settings are performed automatically simply by selecting a connection and using the quick setup function.

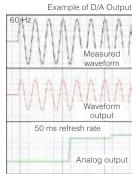

Extensive Interface for Linking with External Devices

Wide variety of built-in interfaces, including LAN, USB (communication, memory), CF cards, RS-232C, synchronization control, and external control.

D/A output* delivers analog output at 50 ms for up to 16 parameters. The voltage and current waveform** for each channel can also be output.

Built-in for PW3390-02 and PW3390-03

** During waveform output, accurate reproduction is possible at an output of 500 kS/s and with a sine wave up to 20 kHz

Switch Screens with a Single Touch, Accessing a Variety of Power Analysis Methods

The power analysis engine allows the simultaneous, parallel calculation of all parameters. Access a variety of analysis methods simply by pressing the page keys to switch screens.

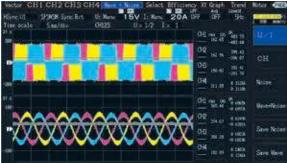

Vector

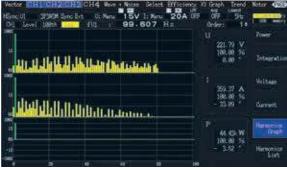

Confirm the voltage/current/power/phase angle for each harmonic order on a vector graph and as numerical values

Waveform

voltage/current waveforms for 4 channels at a high speed of 500 kS/s or a maximum length of 5 seconds. Waveform data can be saved.

Harmonics Graph

Display harmonics up to the 100th order for voltage/current/power in bar graphs. Confirm the numerical data for the selected order at the same time.

Efficiency and Loss

Select 4/8/16/32 display parameters individually for each screen, and summarize them on a single screen.

Display FFT results for voltage and current as graphs and numerical values, up to a maximum of 200 kHz. This is perfect for the frequency analysis of inverter noise.

Choose up to eight measurement parameters and display a graph of their variations over time. You can also save a screenshot of the graph.

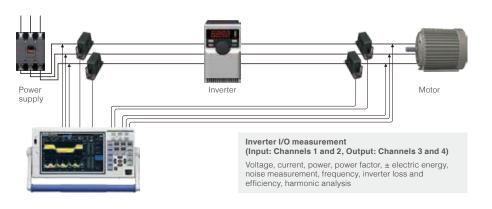

Create inverter characteristic evaluations and motor torque maps. Select the desired parameter to display an X-Y plot graph.

Applications

Measure the Power Conversion Efficiency of Inverters

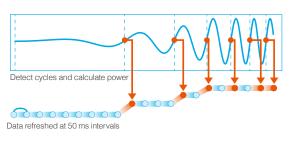

Key features

- 1. Isolated input of voltage and current on each of 4 channels for simultaneous measurement of the primary and secondary power of inverters
- 2. Simultaneous measurement of all analysis of inverters, such as RMS value, MEAN value, and fundamental components
- Easy wiring with current sensors. Reliable confirmation of wiring with vector diagrams 3.
- Current sensors reduce effects of 4 common mode noise from inverters during power measurement
- Simultaneous measurement of noise 5. components, in addition to the harmonic analysis required for the measurement of inverter control

Highly Accurate and Fast 50 ms Calculation of Power in Transient State

Measure power transient states, including motor operations such as starting and accelerating, at 50 ms refresh rates. Automatically measure and keep up with power with fluctuating frequencies, from a minimum of 0.5 Hz.

Automatic detection of fundamental wave even if the frequency fluctuates, from low to high frequencies

Evaluate high-frequency noise /// from an inverter

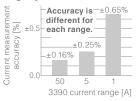

The enhanced noise analysis functionality provided by Version 2.00 of the instrument's firmware lets you perform frequency analysis of noise components from DC to 200 kHz, display and automatically save the top 10 points, and manually save the FFT spectrum. This functionality is an effective tool for evaluating conductive noise from 2 kHz to 150 kHz generated by inverters and switching power supplies

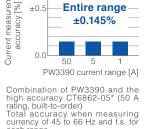

Combined Accuracy of Current Sensors Applicable throughout Entire Range

Combined accuracy throughout the entire range is provided through the use of a built-to-order high accuracy pass-through type current sensor. Obtain highly accurate measurements regardless of range, from large to minute currents, even for loads that fluctuate greatly.

Legacy Model 3390

Combination of 3390 and CT6862-05 (50 A rating) Total Accuracy when measuring currency of 45 to 66 Hz and f.s. for each range

Entire range

Model PW3390

each range

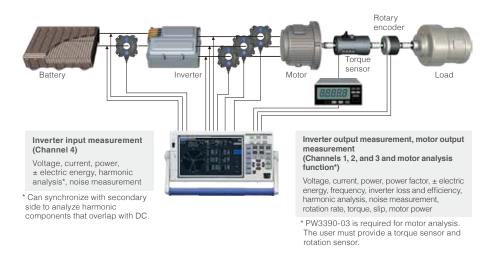

Visually assess temporal fluctuations in efficiency

The trend display lets you graph user-selected measurement parameters such as efficiency and frequency over periods of time ranging from dozens of seconds to half a month. This capability makes it possible to visually assess fluctuations, including of transient states in which measured values fluctuate abruptly and steady states in which they exhibit minuscule fluctuations. Graphs can be saved as screenshots, and values can be automatically saved.

Analyze and Measure EV/HEV Inverter Motors

Key features

- Easy wiring and highly accurate measurements with the use of a pass-through type current sensor
- Simultaneous measurement of all important parameters for secondary analysis of inverters, such as RMS value, MEAN value, and fundamental components
- 3. 0.5 Hz to 5 kHz harmonic analysis without external clock
- Total measurement of inverter motors with built-in motor analysis function
- Measurement of the voltage, torque, rotation rate, frequency, slip, and motor power required for motor analysis with a single unit
- More precise measurements of electrical angle with incremental type encoders

Electric Angle Measurement of Motors (PW3390-03 only)

The PW3390-03 features a built-in electric angle measurement function required for vector control via dq coordinate systems in high-efficiency synchronized motors. Make real-time measurements of phase angles for voltage and current fundamental wave components based on encoder pulses. Further, zero-adjustment of the phase angle when induced voltage occurs allows electric angle measurement based on the inductive voltage phase. Version 2.00 of the firmware introduces the ability to display and manually set phase zero-adjustment values, making it possible to measure electrical angle using a user-selected zero-adjustment value. Electric angle can also be used as an Ld and Lq calculation parameter for synchronized motors.

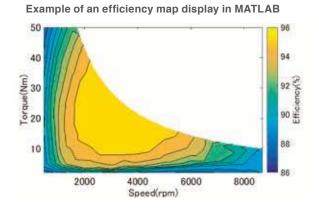

/ Ver 2.00 //

Display motor electric angles on the vector screen

Evaluate inverter motor efficiency and loss

Evaluate efficiency and loss for an inverter, motor, and overall system by simultaneously measuring the inverter's input and output power and the motor's output. You can also create an efficiency map or loss map in MATLAB using measurement results recorded by the PW3390 at each operating point.*MATLAB is a registered trademark of Mathworks, Inc.

For CH B, enter the Z-phase pulse of the encoder to measure electric angle, and enter the B-phase pulse to measure rotation direction.

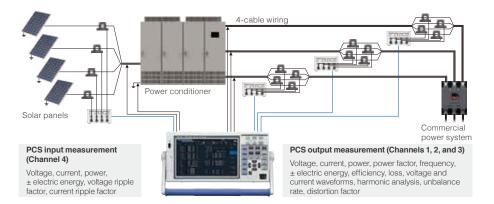

Transfer to Data Logger via Bluetooth[®] wireless technology

Connect the PW3390 and a data logger (with support of LR8410 Link) via Bluetooth[®] wireless technology to wirelessly transmit 8 parameters of measurement values from the PW3390 to the data logger. In addition to the voltage, temperature, humidity, and other parameters measured by the multichannel data logger, you can also integrate the measurement values of the PW3390 and observe and record them in real time.

* Connection requires the serial - (Bluetooth® wireless technology) conversion adapter and power supply adapter recommended by Hioki. Please inquire with your Hioki distributor.

Measure the Efficiency of PV Power Conditioners (PCS)

Key features

- 4 built-in channels, standard. Simultaneously measure the I/O characteristics of power conditioners.
- Current sensors can measure even large currents with high accuracy. Reliable confirmation of wiring with vector diagrams.
- Measure the amount of power sold/ purchased from power conditioner output on interconnected systems with a single unit.
- DC mode integration function, which responds quickly to input fluctuations such as with solar power, built in.
- Measure ripple factor, efficiency, loss, and all other parameters that are required for the measurement of power conditioners for solar power with a single unit.

HIOKI's Current Measurement Solutions for Large Currents of 1000 A or More

Introducing a lineup of sensors taking measurements up to 6000 A for 50 Hz/60 Hz, and up to 2000 A for direct current. The CT9557 SENSOR UNIT lets you add the output waveforms from multiple high accuracy sensors. Use multi-cable wiring lines to take highly accurate measurements of up to 8000 A.

Support for PCS Parameters

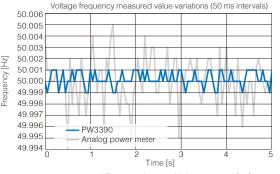

Simultaneously display the parameters required for PCS, such as efficiency, loss, DC ripple factor, and 3-phase unbalance rate. Easily check the required measured items for improved test efficiency. By matching the measurement synchronization source for both input and output, you can perform DC power measurements that are synchronized with the output AC as well as stable efficiency measurements.

Perform the frequency measurements that are required for various PCS tests with industry-leading accuracy and stability. Take highly accurate frequency measurements on up to 4 channels simultaneously, while also measuring other parameters at the same time.

* If you require even higher accuracy for frequency, please inquire with your local Hioki distributor.

Test Automobile Fuel Economy

Key features

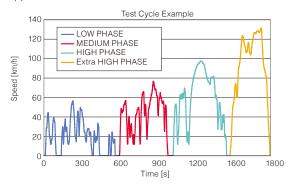

- Accurately measure recharge and discharge power with excellent basic accuracy and DC accuracy.
- 4 built-in channels, standard. Support for multiple recharge and discharge measurements, including auxiliary batteries.
- Easily achieve highly accurate measurements with clamp sensors, which can be used in a wide range of operating temperatures.
- Easily link with other measuring instruments through integration control with an external control interface.

Scan QR Code to Watch Video Illustrating Fuel Economy Evaluation of an Automobile

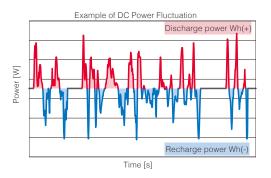

Evaluate WLTC Mode Performance - A New Fuel Economy Standard

Taking fuel economy measurements that comply with WLTP international standards requires the precise measurement of current integration and power integration for the recharging/ discharging of each battery in the system. High accuracy clamp current sensors, the excellent DC accuracy of the PW3390, and the ability to integrate current and power at 50 ms intervals are extremely effective in meeting this application.

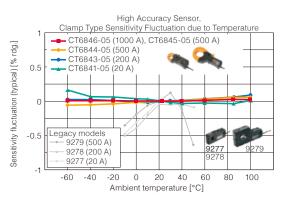

Current and Power Integration Function by Polarity

DC integration measurement integrates the recharging power and discharging power by polarity for every sample at 500 kS/s, and measures positive-direction power magnitude, negative-direction power magnitude, and the sum of positive- and negative-direction power magnitude during the integration period. Accurate measurement of recharging power and discharging power is possible even if there is rapid repetition of battery recharging/discharging.

Optimal Current Sensors for Automotive Testing

Easily connect high accuracy clamp-type sensors without cutting the cables. Sensors operate over a temperature range of -40°C to 85°C (-40°F to 185°F), characteristics that enable highly accurate measurements even inside the engine room of a car.

Link to Peripheral Devices via External Control

Use external control terminals to START/STOP integration and capture screen shots. This makes it easy to control operations from console switches and link to the timing of other instruments when measuring the performance of an actual automobile.

External Appearance

Software

Download software, drivers, and the Communications Command Instruction Manual from the Hioki website. https://www.hioki.com

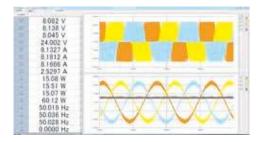

PC Communication Software – PW Communicator

PC Communicator is a free application that connects to the PW3390 via a communications interface (LAN, RS-232C, or GP-IB), making it easy to configure the instrument's

settings and to monitor or save measured values and waveform data from a computer. The software can simultaneously connect to up to 8 Hioki power measuring instruments,

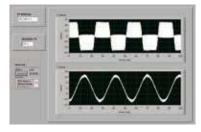

including the PW3390, Power Analyzer PW6001, Power Meter PW3335, PW3336, and PW3337, and it can provide integrated control over multiple models. The software can

also be used to simultaneously save measurement data on the computer and calculate efficiency between instruments.

LabVIEW driver

Use the bundled LabVIEW driver to build a measurement system via a simple programming interface that lets you place icons on a window and connect them with lines. Multiple sample programs for configuring settings and downloading data are available, so you can get started right away.

*LabVIEW is a registered trademark of National Instruments.

GENNECT One SF4000

The SF4000 is a free application software that lets you display and save measurement data on a PC in real-time after connecting the PW3390 to the PC via Ethernet.

The application is also compatible with other Hioki measuring instruments such as Memory HiLogger LR8450 and the Wireless Logging Station LR8410, letting you connect up to 15 units at the same time to monitor, graph and display lists of measured values from multiple instruments all at once and in real-time. This is especially effective for performing a total analysis of power, temperature and other factors of equipment.

Remote control using an web browser

Use the PW3390's HTTP server function to connect to a computer via a LAN interface. You can configure settings or check data from a remote location using a virtual control panel that is displayed in the browser window.

-3. Integration Measurement Specifications

Measurement mode	Selectable between RMS or DC for each wiring mode
Measurement items	Current integration (Ih+, Ih-, and Ih), active power integration (WP+, WP-, and WP) Ih+ and Ih- only for DC mode measurements, and Ih only for RMS mode measurements
Measurement method	Digital calculation from each current and active power phase (when averaging, calculates with previous average value) In DC mode: calculates current value at every sample, and integrates instantaneous power independent of polarity In RMS mode: Integrates current effective values between measurement intervals, and polarity-independent active power value
Measurement interval	50 ms data update interval
Measuring range	Integration value: 0 Ah/Wh to ±9999.99 TAh/TWh Integration time: No greater than 9999h59m
Integration time accuracy	±50 ppm ±1 dgt. (0°C to 40°C (32°F to 104°F))
Integration accuracy	± (current and active power accuracy) ± integration time accuracy
Backup function	Integration automatically resumes after power outages.

-5. Noise Measurement Specifications

0	
Calculation channels	1 (Select one from CH1 to CH4)
Calculation items	Voltage noise/Current noise
Calculation type	RMS spectrum
Calculation method	Fixed 500 kS/s sampling, thinning after digital anti-aliasing filter
FFT calculation word length	32 bits
FFT data points	1000/5000/10,000/50,000 (according to displayed waveform recording length)
Anti-aliasing filter	Automatic digital filter (varies with maximum analysis frequency)
Windows	Rectangular/Hanning/flat-top
Data update interval	Determined by FFT points within approx. 400 ms, 1 s, 2 s, or 15 s, with gap
Highest analysis frequency	200 kHz/50 kHz/20 kHz/10 kHz/5 kHz/2 kHz
Frequency resolution	0.2 Hz to 500 Hz (Determined by FFT points and maximum analysis frequency)
Noise amplitude measurement	Calculates the ten highest level and frequency voltage and current FFT peak values (local maxima).
Lower limit noise frequency	0 kHz to 10 kHz
-6. Motor Analysis	Specifications (Model PW3390-03)
Number of input channels	3 channels CH A: Analog DC input/Frequency input (selectable) CH B: Analog DC input/Pulse input (selectable) CH Z: Pulse input
Measurement input terminal type	Insulated BNC jacks
Input impedance (DC)	1 MΩ ±100 kΩ
Input methods	Isolated and differential inputs (not isolated between channels B and Z)
Measurement items	Voltage torgue rotation rate frequency slip and motor power

wiedsdreinent tterns	voltage, torque, rotation rate, nequency, sip, and motor power
Synchronization source	U1 to U4, I1 to I4, Ext (with CH B set for pulse input), DC (50 ms/100 ms)
	Common to channels A and B
Measurement	f1 to f4 (for slip calculations)
frequency source	
Maximum input voltage	±20 V (during analog, frequency, and pulse input)
Maximum rated voltage to earth	50 V (50 Hz/60 Hz)

(1). Analog DC Input (CH A/CH B)

Measurement range	±1 V, ±5 V, ±10 V (when inputting analog DC)
Valid input range	1% to 110% f.s.
Sampling	10 kHz/16 bits
Response time	1 ms (measuring zero to full scale, with LPF off)
Measurement method	Simultaneous digital sampling and zero-crossing synchronous calculation system (cumulative average of intervals between zero crossings)
Measurement accuracy	±0.08% rdg. ±0.1% f.s.
Temperature coefficient	±0.03% f.s./°C
	Not more than ±0.01% f.s. (with 50 V [DC or 50 Hz/60 Hz] between measurement jacks and PW3390 chassis)

Effect of external	Not more than $\pm 0.1\%$ f.s. (at 400 A/m DC and 50 Hz/60 Hz magnetic fields)
magnetic field LPF	OFF/ON (OFF: 4 kHz, ON: 1 kHz)
Total display area	Zero-suppression range setting ±120%
Zero adjustment	Zero-corrected input offset of voltage ±10% f.s. or less
Scaling Unit	0.01 ~ 9999.99 CH A: V, N• m, mN• m, kN• m, CH B: V, Hz, r/min
(2). Frequency Inpu	1
Valid amplitude range Max. measurement frequency	±5 V peak (5 V symmetrical, equivalent to RS-422 complementary signal) 100 kHz
Measurement range	1 kHz to 100 kHz
Data output interval	According to synchronization source
Measurement accuracy Total display area	±0.05% rdg., ±3 dgt. 1.000 kHz to 99.999 kHz
Frequency range	Select fc and fd for frequency range fc \pm fd [Hz] (frequency measurement only) 1 kHz to 98 kHz in 1 kHz units, where fc + fd < 100 kHz and fc - fd > 1 kHz
Rated torque Unit	1 ~ 999 Hz, N• m, mN• m, kN• m
3). Pulse Input (CH	H B only)
Detection level	Low: 0.5 V or less; High: 2.0 V or more
Measurement range	1 Hz to 200 kHz (at 50% duty) 1 ~ 60000
Division setting range Measurement	 0.5 Hz to 5.0 kHz (limited to measured pulse frequency divided by selected no.
frequency range	of divisions)
Minimum detectable pulse width	2.5 µs or more
Measurement accuracy	±0.05% rdg., ±3 dgt.
Motor poles	2~98
Max. measurement	100 Hz, 500 Hz, 1 kHz, 5 kHz
frequency Pulse count	Integer multiple of half the number of motor poles, from 1 to 60,000
Unit	Hz, r/min
4). Pulse Input (CH	HZ only)
Detection level	Low: 0.5 V or less; High: 2.0 V or more
Measurement range	0.1 Hz to 200 kHz (at 50% duty)
Minimum detectable pulse width	2.5 µs or more
Settings	OFF/Z Phase/B Phase (clear counts of CHB in rising edge during Z Phase,
	detect polar code for number of rotations during B Phase)
	on Specifications (Models PW3390-02 and PW3390-03)
Number of output channels Output contents	16 channels CH1 to CH8: Selectable analog/waveform outputs
Output contents	CH9 to CH16: Analog output
Output items	Analog output: Select a basic measurement item for each output channel.
Output connector	Waveform output: Output voltage or current measured waveforms. One 25-pin female D-sub
D/A conversion	16 bits (polarity + 15 bits)
resolution	
Output accuracy	Analog output: Measurement accuracy ±0.2% f.s. (DC level) Waveform output: Measurement accuracy ±0.5% f.s. (at ±2 V f.s.),
	±1.0% f.s. (at ±1 V f.s.)
Output update interval	(rms level within synchronous frequency range) Analog output: 50 ms (according to input data update interval of selected paramete
	Analog output: 50 ms (according to input data update interval of selected paramete Waveform output: 500 kHz
Output voltage	Analog output: 50 ms (according to input data update interval of selected parameter Waveform output: ±50 kHz Analog output: ±5 V DC nom. (approx. ±12 V DC max.) Waveform output: ±2 V/±1 V switchable, crest factor of 2.5 or greater Setting applies to all channels.
Output voltage Output impedance	Analog output: 50 ms (according to input data update interval of selected parameter Waveform output: 500 kHz Analog output: ± 5 V DC nom. (approx. ± 12 V DC max.) Waveform output: ± 2 V/ ± 1 V switchable, crest factor of 2.5 or greater Setting applies to all channels. 100 $\Omega \pm 5 \Omega$
Output voltage Output impedance Temperature coefficient	Analog output: 50 ms (according to input data update interval of selected parameter Waveform output: 500 kHz Analog output: \pm 5 V DC nom. (approx. \pm 12 V DC max.) Waveform output: \pm 2 V/ \pm 1 V switchable, crest factor of 2.5 or greater Setting applies to all channels. 100 $\Omega \pm$ 5 $\Omega \pm$ \pm 0.05% f.s./°C

(5). RS-232C Interface

Method	RS-232C, [EIA RS-232D], [CCITT V.24], [JIS X5101] compliant	
Method	Full duplex, start-stop synchronization, 8-bit data, no parity, one stop bit	
	Hardware flow control. CR+LF delimiter	
0		
Connector	D-sub9 pin connector ×1	
Communication speeds	9600 bps, 19,200 bps, 38,400 bps	
Function	Command control, Bluetooth® logger connectivity (simultaneous use not supported)	
(6). Synchronizatio	n Control Interface	
Signal contents	One-second clock, integration START/STOP, DATA RESET, EVENT	
Connector types	IN: One 9-pin female mini-DIN jack, OUT: One 8-pin female mini-DIN jack	
Signal	5 V CMOS	
Max. input	±20 V	
Max. signal delay	2 μs (rising edge)	
(7). External Contro	bl Interface	
Connector types	9-pin round connector x1; also used as synchronization control interface	
Electrical specifications	Logic signal of 0 V/5 V (2.5 V to 5 V), or contact signal (shorted/open)	
Function	Integration start, integration stop, data reset, event (the event set as the	
	synchronization control function)	
	Cannot be used at the same time as synchronization control.	

Function Specifications

 Control Function 	IS	
AUTO range function	Automatically selects voltage and current ranges according to measured ampli- tude on each phase. Operating states: Selectable on or off for each phase system Auto-ranging span: Wide/Narrow (common to all wiring systems)	
Timing control function	Interval OFF/50 ms/100 ms/200 ms/500 ms/1 s/5 s/10 s/ 15 s/30 s/1 min/5 min/10 min/15 min/30 min/60 min Setting determines the maximum data-saving capacity Timing controls OFF/Timer/RTC Timer File to s to 9999:59:59 [h:m:s] (in seconds) Real-time clock : Start and stop times (in minutes)	
Hold function	Stops all updating of displayed measurement values and waveforms, and holds display. Internal calculations such as integration and averaging, clock, and peak-over display continue to be updated.	
Peak hold function	All measurement values are updated to display the maximum value for each measurement. Displayed waveforms and integration values continue to be updated with instan- taneous values.	
2. Calculation Fun	ctions	
Scaling calculation	VT(PT) ratio and CT ratio: OFF/0.01 to 9999.99	
Average calculation	OFF/FAST/MID/SLOW/SLOW2/SLOW3 Exponentially averages all instantaneous measurement values including harmonics (but not peak, integration, or FFT noise values). Applied to displayed values and saved data. Response speed (time remains within specified accuracy when input changes from 0 to 100% f.s.) FAST: 0.2 s, MID: 1.0 s, SLOW: 5 s, SLOW2: 25 s, SLOW3: 100 s	
Efficiency and loss calculations	Efficiency n [%] and Loss [W] are calculated from active power values measured on each phase and system. For PW3390-03, motor power (Pm) is also applied as a calculation item. Maximum no. of simultaneous calculations: Efficiency and loss, by three formulas (Parameters are specified for Pin and Pout) Calculation method: Efficiency n = 100 x Poutl/ Pinl Loss = Pinl - Poutl	
∆-Y calculation	For 3P3W3M systems, converts between line-to-line voltage and phase voltage waveforms using a virtual center point. All voltage parameters including harmonics such as true rms voltage are calculated as phase voltage waveforms. U1s = (U1s-U3s)/3, U2s = (U2s-U1s)/3, U3s =(U3s-U2s)/3	
Selecting the calculation method	TYPE1/TYPE2 (only valid when wiring is 3P3W3M) Select the calculation method used to calculate the apparent power and reactive power during 3P3W3M wiring. Only affect measurement values S123, Q123, q123, h123	
Current sensor phase correction calculations	Compensation by calculating the current sensor's harmonic phase characteristics Correction points are set using frequency and phase difference (set separately for each wiring mode). Frequency: 0.001 kHz to 999.999 kHz (in 0.001 kHz increments) Phase difference: 0.00°. to 490.00°. (in 0.01°, increments) However, the time difference calculated from the frequency phase difference is limited to a maximum of 200 us in 5 ns increments.	
 Display Functio 	ns	
Wiring Check screen	The wiring diagram and voltage/current vectors are displayed for the selected wiring system(s). The correct range for the wiring system is shown on the vector display, to confirm proper measurement cable connections.	
Independent wiring system display mode	Displays power and harmonic measurement values for channels 1 to 4. A composite measurement line pattern is displayed for each system. Basic, voltage, current, and power measurement parameter, harmonic bar graph, harmonic list, and harmonic vector screens	
Display Selections screen	Select to display any 4, 8, 16, or 32 of the basic measurement parameters. Display layout: 4, 8, 16, or 32 parameters (4 patterns) The officiency and loss obtained by the paraelitical equivalence of the second se	
Efficiency and Loss screen	The efficiency and loss obtained by the specified calculation formulas are displayed numerically. Three efficiency and three loss values.	
Waveform & Noise screen	Voltage and current waveforms sampled at 500 kHz and noise measurements are displayed compressed on one screen. Trigger: Synchronized with the harmonic sync source Recording length: 1000/5000/10.000/50,000 x All voltage and current channels Compression ratio: 1/1, 1/2, 1/5, 1/10, 1/20, 1/50 (peak-to-peak compression) Recording time:	

-				
Recording speed/ Recording length	1000	5000	10,000	50,000
500 kS/s	2 ms	10 ms	20 ms	100 ms
250 kS/s	4 ms	20 ms	40 ms	200 ms
100 kS/s	10 ms	50 ms	100 ms	500 ms
50 kS/s	20 ms	100 ms	200 ms	1000 ms
25 kS/s	40 ms	200 ms	400 ms	2000 ms
10 kS/s	100 ms	500 ms	1000 ms	5000 ms

	Display a time-sequence graph of measured values for basic measurement parameters that have been selected as trend display parameters. Waveforms are graphed using peak-peak compression of data refresh rate data based on the time axis setting. Data is not stored. Number of graphed parameters: Up to 8 Time axis: 1.5 / 3 / 6 / 12 / 30 s/div; 1 / 3 / 6 / 10 / 30 min./div.; 1 / 3 / 6 / 12 hour/div; 1 day/div. Vertical axis: Auto (configured so that the data in the screen display range fits on the screen) / semi-auto (user selects the zoom factor relative to the full-scal values for graphed parameters from the following: 1/8, 1/4, 1/2, x1, x2, x5, x10, x50, x100, x200, x500) / manual (user sets the maximum and minimum values
	for the display)
X-Y Plot screen	Select horizontal and vertical axes from the basic measurement items to displa on the X-Y graphs. Dots are plotted at the data update interval, and are not saved.
	Drawing data can be cleared. Horizontal: 1 data item (gauge display available), Vertical: 2 data items (gauge
	display available)
 Saving Function 	18
Auto-save function	As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. The selected items are stored to CF card during every measurement interval. (Storage to USB memory is not available.) Can be controlled by timer or real-time clock. Max. no. of saved items: Interval-setting-dependent Data format: CSV format
Manual saving function	
	Measurement data As the items to be saved, select any measured values including harmonics and noise value data of the FFT function. Pressing the SAVE key saves each measurement value at that moment to the save destination. File format: CSV format Soreen capture
	The COPY key captures and saves a bitmap image of the display to the sav destination. *This function can be used at an interval of 5 sec or more while automatic saving is in progress. File format: Compressed BMP format * Settings data
	Settings information can be saved/loaded as a settings file. File format: SET format (for PW3390 only) • Waveform data Saves the waveform being displayed by means of [Wave/Noise] display. File format: CSV format
	 FFT data Save the noise measurement FFT spectrum shown on the Waveform/Noise scree File format: CSV format
-5. Synchronous C	ontrol Function
Function	Synchronous measurements are available by using sync cables to connect Model PW3390 (master/slave). When internal settings match, auto-save is available while synchronized.
Synchronized items	Clock, data update interval (except for FFT calculations), integration start/stop data reset, certain events
Event items	Hold, manual save, screen capture
Synchronization timing	Clock, data update interval Within 10 s after power-on by a slave PW3390 Start/stop, data reset, event
Synchronization timing	Within 10 s after power-on by a slave PW3390 • Start/stop, data reset, event Upon key-press and communications operations on the master PW3390
Synchronization timing Synchronization delay	Within 10 s after power-on by a slave PW3390 • Start/stop, data reset, event Upon key-press and communications operations on the master PW3390 Maximum 5 μs per connection. Maximum synchronization delay of an event is +50 r
Synchronization timing	Within 10 s after power-on by a slave PW3390 • Start/stop, data reset, event Upon key-press and communications operations on the master PW3390 Maximum 5 μ s per connection. Maximum synchronization delay of an event is +50 r
Synchronization timing Synchronization delay -6. Bluetooth [®] Logg Function	Within 10 s after power-on by a slave PW3390 • Start/stop, data reset, event Upon key-press and communications operations on the master PW3390 Maximum 5 µs per connection. Maximum synchronization delay of an event is +50 n ger Connectivity Sends measured values wirelessly to logger by using a Bluetooth® serial conversion adapter.
Synchronization timing Synchronization delay -6. Bluetooth® Logg Function Supported devices	Within 10 s after power-on by a slave PW3390 * Start/stop, data reset, event Upon key-press and communications operations on the master PW3390 Maximum 5 μs per connection. Maximum synchronization delay of an event is +50 m ger Connectivity Sends measured values wirelessly to logger by using a Bluetooth® serial conversion adapter. Hioki LR8410 Link-compatible loggers (LR8410, LR8416)
Synchronization timing Synchronization delay -6. Bluetooth® Logg Function Supported devices Sent data	Within 10 s after power-on by a slave PW3390 * Start/stop, data reset, event Upon key-press and communications operations on the master PW3390 Maximum 5 µs per connection. Maximum synchronization delay of an event is +50 r ger Connectivity Sends measured values wirelessly to logger by using a Bluetooth® serial conversion adapter. Hioki LR8410 Link-compatible loggers (LR8410, LR8416) Measured values assigned to the D/A CH9 to CH16 analog output parameters
Synchronization timing Synchronization delay -6. General Specifications

Operating environment	Indoors, Pollution Degree 2, altitude up to 2000 m (6562.20 ft)		
Operating temperature	Temperature: 0°C to 40°C (32°F to 104°F), Humidity: 80% RH or less		
and humidity	no condensation)		
Storage temperature and humidity	-10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation)		
Dustproof and waterproof	IP30 (EN 60529) (With CF card cover open: IP20)		
Applicable standards	Safety EN 61010		
	EMC EN 61326 Class A		
Power supply	100 V to 240 V AC, 50 Hz/60 Hz, Maximum rated power: 140 VA		
	Anticipated transient overvoltage: 2500 V		
Backup battery life	Clock, settings and integration values (Lithium battery), Approx. 10 years, @23°C (73°F)		
Dimensions	340 mm (13.39 in) W \times 170 mm (6.69 in) H \times 156 mm (6.14 in) D (excluding protrusions)		
Mass	4.6 kg (162.3 oz) with PW3390-03		
Product warranty period	3 year		
Accessories	Instruction Manual ×1, Measurement Guide ×1, Power cord ×1, USB cable (0.9 m		
	(2.95 ft)) ×1, Input cord label ×2, D-sub connector ×1 (PW3390-02, PW3390-03)

VOLTAGE CORD L9438-50 Red, black: 1 each,

1000 V specification, Cord length: 3 m (9.84 ft)

CAT IV 600 V. CAT III 1000 V

VOLTAGE CORD L1000 Red, yellow, blue, gray: 1 each; Black: 4 1000 V specification, Cord length: 3 m

(9.84 ft) CAT IV 600 V, CAT III 1000 V 14

WIRING ADAPTER PW9000

When making a 3-phase 3-wire (3P3W3M) connection, this product allows you to reduce the number of

voltage cords from 6 to 3.

For motor analysis input

Cable length: 1.6 m (5.25 ft)

Connection Options -

CONNECTION CORD L9217 BNC-BNC,

NNECTION CABLE 9683

For synchronous measurement, Cable length: 1.5 m (4.92 ft)

HIOKI E.E. CORPORATION

Ueda, Nagano 386-1192 Japan https://www.hioki.com/

> Scan for all regional contact

HEADQUARTERS 81 Koizumi.

LAN CABLE 9642

Supplied with straight to cross conversion connector Cable length: 5 m (16.41 ft)

RS-232C CABLE 9637 9pin-9pin cross Cable length: 1.8 m (5.91 ft)

D-sub 25-pin - BNC (male) 16 ch conversion, Cord length: For EIA or JIS 2.5 m (8.20 ft)
